

Product model: HPM189 high temperature pressure transmitter

Manufacturer: Nanjing Hangjia Electronic Technology CO., LTD.

Product category: pressure transmitter

Application: measurement of corrosive gases, liquids and vapors in hydraulic and pneumatic equipment, servo valves and drives, chemical products and chemical industry, environmental protection, machinery and other fields

Overview

HPM189 High Temperature Pressure Transmitter adopts high temperature resistance pressure sensing core as sensitive element, and transforms the pressure of measured medium to pressure sensor by heat radiation structure of transmitter. The signal circuit with low temperature drift in the stainless steel shell transforms the signal of transmitter to standard current signal output. It can be directly connected with computers, control instruments, display instruments, etc. This products used integrative stainless steel structure with many features such as excellent functions, easy installation, impact resistance and vibration resistance. The high temperature resistance core and heat radiation structure guarantee it can be used for high temperature medium for a long time.

Features

- .Imported high temperature pressure sensing core
- .Applicable medium temperature range is wide, $-40 \sim 200^{\circ}\text{C}$
- .Protection class IP65
- .Reverse polarity protection and instantaneous over-current and over-voltage protection, in line with EMI protection requirements
- .Shock resistance, shock resistance, corrosion resistance
